Public Notice

Hyde County GIS Online and Available to the Public

Hyde County is pleased to announce that the Hyde County GIS website has been completed and is available to the public online. Atlas Geographic Data, Inc. compiled the GIS data under contract for Hyde County and is hosting/maintaining the GIS website. Additionally, Atlas Geographic Data, Inc. developed a helpful tool to make GIS easier to use while still making the GIS data productive for more advanced analysis of geographic data.

The public can access Hyde County's GIS website through the County website at www.hydecountync.gov or directly at www.hydecountygis.com. All Hyde County GIS website visitors will be prompted to register for free access. The information gathered through registration is for improving the site and will not be redistributed. Upon receiving a unique username and password, users will have the ability to:

- Construct and export maps utilizing a number of GIS layers (parcels, aerial photography, soil, address point, centerlines, ESN boundaries, Water boundaries, etc.)
- Conduct linear measurements and measurements that encompass a given area
- Query geographic data
- View tax parcel information
- Retrieve property record cards

Tax Administrator Linda Basnight said, "We hope that the GIS website is received well and will greatly benefit the citizens of the county."
